IDENTIFIERS	*California

ABSTRACT

This study summarizes data on the number of transfer students from various California community colleges to the 20 California state universities. Table 1 shows the distribution of the percentage of students from community colleges attending state universities. Each of seven colleges contribute 3 percent of the total, 19 colleges contribute 2 percent of the total, 44 colleges contribute 1 percent of the total, and 26 colleges contribute less than 1 percent. Table 2 shows the number of transfers from California community colleges to each of the California state universities, and table 3 translates these data into percentages. Table 4 is similar to table 2, but organizes the data by community colleges, instead of by state universities. Table 5 translates these data into percentages. Humboldt State University has students from 64 community colleges, followed by San Luis Obispo, with students from 56 community colleges. While some of the newer community colleges transfer students to only one or a few state universities, three community colleges have students that transfer to 19 of the 20 state universities. These include Mount San Antonio College, Rio Hondo, and Santa Monica City College. (NHM)

AN ANALYSIS OF THE INCIDENCE OF STUDENTS TRANSFERRING FROM CALIFORNIA COMMUNITY COLLEGES TO CALIFORNIA STATE UNIVERSITIES

Fall, 1973

Periodically, the California state universities publish information indicating the number of transfer students from various community colleges to the 20 University of California universities. With approximately 100 community colleges, the reporting of students from these community colleges to the 20 universities can become involved. The present study has summarized the data and presented them on five tables so that the information can be easily read by consumers.

If each community college sent an equal amount of students to the various state universities, each college would account for approximately one per cent of the contribution. However, with some colleges being larger, they contribute an excess of one per cent while the smaller colleges contribute less than one per cent. Table 1 indicates those colleges that represent three per cent, two per cent, one per cent, and less than one per cent of the colleges having students transfer to the University. Seven colleges contribute three per cent. These include American River, El Camino, Fresno City, Fullerton, Long Beach City, Los Angeles Pierce, and San Francisco City. A reader can find from Table 1 those colleges that contribute two per cent, one per cent, and less than one per cent.

Table 2 is an interesting table in that it indicates the number of students transferring from the various community colleges to the State universities. It is seen that Calexico has 77 transferees from seven different community colleges. Humboldt has students from 64 community colleges followed by San Luis Obispo, which has students from 56 California community colleges. Thus, Humboldt has students from approximately two-thirds of the community colleges in the State. Possible explanation of these two colleges having such a high representation from community colleges and both being in rather inacessible areas could be attributed to their emphasis on environmental studies at this particular time. Humboldt attracts students from community colleges throughout the State. It is interesting to compare this information with Los Angeles which has students only from Southern California and with the exception of Fullerton and Chaffey only students from community colleges in Los Angeles County. The largest campus in the State of any school, Long Beach State University, also shows virtually all of its students having attended Southern California community colleges. Long Beach has a relatively homogeneous group fror which it draws in terms of community colleges, especially in relationship to its size. It is noted that over 1,000 students of Long Beach attended only two community colleges, Long Beach City and El Camino. El Camino College is identified in rectangles on Table 2. Transferees from El Camino College attend 13 of the 20 state universities or 68 per cent.

Table 3 is similar to Table 2 but translates the numbers of students into percentages. All columns do not add up to 100 per cent because of rounding errors. If the numbers were carried to tenths rather than whole percentages, all columns would be closer to 100 per cent. The highest

two per cents of the chart on the chart is Calexico with 79 and Bakersfield with 78. Thus, Calexico Center has 79 per cent of its transferees coming from Imperial Valley Community College, and Bakersfield has 78 per cent of its transferees coming from Bakersfield Community College.

The data from Table 4 are similar to those in Table 2 but show more readily the universities in which students transfer according to various community colleges. Three community colleges have students that transfer to more state universities than any other community college in the State. These include Mt. San Antonio College, Rio Hondo, and Santa Monica which have students that transfer to all except one of the state universities. Some of the newer campuses as well as an evening campus show transfers to only one or a few state universities.

Table 5 is similar to Table 4 but in terms of percentages. Both Table 5 and Table 4 have utility for counselors, admission office workers, and in some cases, curriculum development.
